

Case Study: People Analytics at Monami Impex Ltd

Introduction - Md Rifat Rahman (1000054675)

Monami Impex Ltd. has been around since 1982 and has steadily become one of Bangladesh's top manufacturers and exporters of jute products. From yarn to sacks and food-grade bags, the company produces a wide range of eco-friendly products that are in demand both locally and internationally. What sets Monami apart is its commitment to quality and sustainability, which has allowed it to build a strong reputation over the years.

Figure 1: Monami Group Service Years.

But even with its success, Monami is facing some growing pains. As the company has expanded, its HR processes have stayed the same, and that's becoming a problem. Right now, a lot of HR tasks are handled manually, from collecting resumes through email to the informal onboarding process. These methods worked fine in the early years, but now they're slowing things down. Recruitment is taking too long, and performance tracking isn't as consistent as it should be. As Monami looks to grow further, these issues are becoming harder to ignore.

It's clear that something has to change. For Monami to continue expanding and staying competitive, the HR department needs to modernize. People Analytics could be just what the company needs. People Analytics is a way of using data to make smarter HR decisions—whether it's about recruitment, employee performance, or retention. By looking at real data rather than relying on gut feelings, Monami could make better decisions and improve how it manages people.

One tool that could help Monami with this is SAP SuccessFactors. This is an HR platform that can automate many of the tasks that are currently being done manually. Things like recruitment, onboarding, and performance management can be handled in one place. This would save HR staff a lot of time, allowing them to focus on things like employee development and engagement. With SAP SuccessFactors, Monami could get better insights into how things are going with its employees—whether it's tracking performance in real time or seeing which areas need improvement.

The great thing about People Analytics is that it's all about making better, data-driven decisions. For example, if SAP SuccessFactors shows that a particular department has high turnover, HR can step in and figure out why. Or, if certain employees are consistently doing well, the company can take steps to help them grow even further. With People Analytics, HR can make decisions based on real evidence, which is a huge step up from the guesswork involved in the current manual system.

As Monami continues to grow, both in Bangladesh and internationally, it will need a more efficient way of managing its workforce. The company's HR processes can't remain as they are when it's expanding across borders. People Analytics will allow Monami to centralize its HR systems, which is key for a company that's spread out across different locations. No matter where an employee is, they'll have access to the same system and support, which helps keep things consistent across the board.

Of course, no change comes without challenges. Some employees may have concerns about privacy when it comes to their data. And switching to a new system will mean some training is required. But with a clear plan in place, these challenges can be managed.

In the end, Monami Impex Ltd. is at a turning point. It has done well so far, but to keep growing and competing globally, it's time to update the HR processes. People Analytics through a system like SAP SuccessFactors could streamline operations and make the company's HR more efficient, smarter, and aligned with the company's overall goals. While it won't be a quick or easy transition, the potential benefits—better decision-making, a more engaged workforce, and greater efficiency—make it well worth the effort.

Methodology - MD Showrav Zaman (1000055235)

Participant Recruitment

For this case study, we recruited participants from four key departments of Monami Impex Ltd.: Executive Director (ED), Accountant (Acc), Export, and Human Resources (HR). We conducted four in-depth interviews, one from each department, to capture perspectives on the implementation and impact of the People Analytics system (SAP SuccessFactors). We employed a snowball sampling method, beginning with senior management and extending through referrals to other relevant stakeholders. We chose this approach because it allowed us to access participants with specialized knowledge, ensuring a diverse range of viewpoints from different organizational levels.

Figure 2: Snowball Sampling.

Interview Data Collection

For this case study, the data was primarily collected through 4 in-depth interviews conducted with participants from key departments: Executive Director (ED), Accountant (Acc), Export, and Human Resources (HR). Each interview focused on specific aspects of the People Analytics system (SAP SuccessFactors) and its impact on various functions within Monami Impex Ltd. The following interview questions were asked:

Department	Interview Questions
Executive Director (ED)	1. When did the business start? 2. Who are your biggest buyers? Are they mostly dealers, distributors or direct customers and what kind of products do they usually purchase the most? 3. What are the pros and cons of your business model? 4. Where do you see the best profit and the most significant loss? 5. What are the best-selling and least-selling products? 6. Why did you choose this business? 7. Why this product line?
Export	1. What is the typical shipment duration for your exports? 2. How do you communicate with buyers regarding payments and shipping? 3. How do you coordinate with jute mills for supply and pricing? 4. Can you describe the role of the bank officer in handling Letters of Credit (LC)?
Accountant (Acc)	1. Can you explain the VAT-tax procedure at Monami? 2. What is the transaction procedure for exports?
Human Resources (HR)	1. What challenges did you face when adapting to the People Analytics system? 2. What improvements have you noticed in the quality of data and decision-making since adopting People Analytics?

Table 1: Case Study Interview Questions.

We chose these questions (Table 1) because they aim to capture the strategic, operational and financial impacts of People Analytics (SAP SuccessFactors) on Monami Impex Ltd.. These questions provide insights into how the system enhances decision-making, improves efficiency, and drives performance management across various departments. By focusing on the challenges faced during adoption, the effectiveness of the system in improving data quality, and its ability to streamline HR processes, the questions help us evaluate the overall success and future potential of the People Analytics system within the company.

The data from these interviews were used to gather qualitative insights into how People Analytics is impacting various operational areas of the business, focusing on system adoption, challenges, and improvements.

Data Analysis

We transcribed the interviews and applied thematic analysis to identify recurring patterns. The themes were grouped into three main categories:

1. Strategic and operational impacts of People Analytics.
2. Financial management and compliance processes.
3. HR transformation and employee adaptation.

Ethical Considerations

During the study, we followed strict ethical standards. Participants were informed of the purpose of the research and volunteered to participate. They were assured that no identities or responses would be disclosed and that all the information was safely stored and no one but the research team should access any of the information. Participants were also free to leave any time. These steps made sure that our research upheld the rights of the participants and that it did not compromise on academic integrity.

Literature Review - Sara Tayba Rahman (23264004)

People Analytics has significantly transformed the Human Resources (HR) landscape by shifting the focus from intuition-based decision-making to evidence-driven strategies supported by data. Traditionally, as Madhu (2019) points out, HR was largely seen as an administrative function that managed employee relations, payroll, and compliance, with limited emphasis on data analysis or strategic contribution. However, with the advent of People Analytics, HR has evolved into a proactive and strategic partner within organizations, contributing directly to business growth and long-term success.

At its core, People Analytics empowers HR professionals to make informed decisions by analyzing vast amounts of employee-related data, ranging from performance appraisals and self-assessments to engagement surveys, attendance patterns, and even workplace behavior

metrics. By consolidating and interpreting these diverse data points, HR teams are now able to identify patterns, predict workforce trends, and develop targeted strategies that align more closely with organizational objectives.

This shift toward data-driven HR practices not only enhances accuracy in workforce planning but also supports predictive insights—for example, forecasting employee turnover, identifying high-potential talent, or evaluating the effectiveness of training programs. As Lipkin (2015) emphasizes, such practices help ensure that HR's actions are strategically aligned with broader business goals, thereby maximizing organizational performance. Ultimately, People Analytics has transformed HR from a traditionally operational role into a critical driver of organizational strategy, innovation, and competitive advantage.

Findings: Company and Problem Background - Raisul Islam Opu (24341319)

Monami Impex Ltd. was started in 1982, and it has developed into one of the leading manufacturers and exporters of jute products in Bangladesh. The product range of the company covers both jute yarn and twine through food-grade bags and hessian sacks. Although it has a good reputation and successful performance in the industry, Monami has a major problem in the area of human resources (HR) processes. These processes have been largely manual and disconnected over the years thus, preventing the company to scale effectively.

The HR department at Monami is already mired in inefficiency. Recruitment, in particular, has been repeatedly held up due to the manual nature of the process, where resumes are received either via email or face to face and vacancies are not readily available to those interested in the position. The onboarding process is also very relaxed and ad hoc, as there is no standardized process in the process of welcoming and integrating new members in the company. This leads to confusion of new employees and the HR team wastes more time handling such inconsistency.

Besides these difficulties, there is no proper system of monitoring the performance of employees. Without clear performance data, the HR cannot assess employee development and play its part in professional development. Employees are not provided with consistent and practical feedback that would assist them to do better. This lack of a centralized HR system has contributed to more inefficiencies when it comes to HR since it can not communicate efficiently with other departments. Critical information that is not shared across teams because it is siloed makes it difficult to make data-centred decisions. These problems directly affect the capability of the

company to cope with the increasing number of employees and, finally, its ability to expand itself.

Discussion - Raisul Islam Opu (24341319)

The information obtained on this section is through detailed interviews with the HR team of Monami and a questionnaire that was sent to the employees at different departments. These data sources demonstrate the challenges Monami has and the opportunities that may be offered by the implementation of the more modern and data-driven HR system such as SAP SuccessFactors.

Analysis of Interview

When they were interviewed about the HR Manager, they highlighted that SAP SuccessFactors had simplified the recruitment, onboarding and setting of goals in the company. These areas were not as efficient before the implementation of SAP, recruitment used to take longer than expected and integration of employees was a mixed experience. Since SAP SuccessFactors has been introduced, the HR Manager noted that the recruitment process is now much faster. Applicants can now apply online very easily, and applicants can be tracked and resumes reviewed as rapidly as possible by hiring managers. Onboarding has also become systematic and organized, as new employees are now well welcomed into the firm and given the appropriate resources and their role. Also, the goal-setting aspect of the system has ensured that employees have an outlook of their performance and performance benchmarks to strive towards the attainment of company goals. The HR Manager emphasized that in this alignment, measuring the goals set and which can be followed up over a period has contributed in enhancing the performance in the overall sense. The software has enabled the HR operations to be more efficient, organized and linked well with the larger objectives of Monami.

Analysis of Survey

The questionnaire that was carried out on the employees showed that employees were both optimistic and cautious about the implementation of People Analytics using SAP SuccessFactors. The benefits that were possible were recognized by a large number of the employees particularly in regard to simplification of HR processes, simplification of the recruitment process and also in

the area of enhancing goal-setting. Nevertheless, some issues pertaining to the implementation of the system also existed. Many employees complained about privacy with data. As the more data-driven approach was implemented, some employees were afraid of what will happen to their personal information and whether it will be retained safely. This is an aspect that is usually raised when implementing new technologies that are based on the gathering and examination of employee data. Moreover, some employees did not find contentment with the training offered. The potential of the software was identified but it was also agreed that employees were not well equipped to utilize all the capabilities of SAP SuccessFactors. Absence of proper training and support has also caused some workers to be hesitant since they believe they have not been equipped with the required resources to make the best out of the software.

Recommendation - Raisul Islam Opu (24341319)

Enhance Transparency

Since data privacy is a major issue that several employees have expressed concern over, it is important that Monami explains how employee data will be utilised. The company ought to explain clearly the intention of gathering and analyzing data and what security measures are available to guard the same. Frequent changes and transparent communication on data policy would be a long way in gaining trust among employees. By ensuring that employees have information on how their data are being utilized like enhancing HR to better HR processes or formulating more personalized development plans, anxiety will be minimized and employees will be more encouraged to buy into the system. Moreover, the development of the clear data access and retention policy will allow reducing concerns and ensuring transparency during the implementation process and after it.

Invest in Training

Among the recommendations that should be made in priority is the increased investment in training of all the employees. Although SAP SuccessFactors has numerous strong features, the employees stated that they did not know how to use some functions because of the lack of training. To make sure that every employee, including HR personnel and others, feels free and at ease with the software, Monami ought to implement detailed training programs. The training

needs to be specific to various groups in the company, the HR personnel would require the more in-depth training on features of the system such as performance tracking and goal-setting, and other departments might require training on accessing major reports and data. Moreover, continuous assistance and refresher training must also be provided so that the employees are able to constantly increase their digital capability and keep in touch with software updates or any new functions.

Focus on Collaboration

Last, although People Analytics can bring great advantages, Monami needs to be more collaborative in the way it implements it. This does not only imply the use of the software to address all HR issues, but it should also be used in conjunction with the contribution and feedback of managers and team leaders. Frequent liaisons between HR and other departments are fundamental in ensuring that data received by the SAP SuccessFactors can be utilized well. The HR should engage in close collaboration with managers, in goal-setting and performance discussions and should ensure that the software is meeting the correct needs. A less exclusive and more collaborative strategy would assist in making People Analytics more efficient and make sure that it is capable of contributing to the overall development and improvement of the company.

Conclusion - Mehbub Shifat Ur Rasul (1000055399)

In an increasingly interconnected global market, Monami Impex Ltd. finds itself at a pivotal crossroads, where its trajectory from a successful domestic player to a formidable international entity hinges on its ability to evolve its core operational frameworks. The preceding analysis has meticulously detailed the compelling case for a strategic shift in human resource management—from traditional, reactive methods to a proactive, data-driven approach powered by People Analytics. The implementation of such a system is not merely a technological upgrade but a fundamental re-imagining of how the company identifies, nurtures, and retains the talent essential for navigating the complexities of global expansion. This conclusion synthesizes the

key arguments, reaffirms the strategic imperative of People Analytics, and outlines a forward-looking roadmap for Monami to realize its full potential.

The evidence presented throughout this paper demonstrates that a scalable and robust HR solution is no longer a luxury but a necessity for Monami. The company's current HR infrastructure, while sufficient for its domestic operations, is ill-equipped to handle the exponential growth in workforce size and the cultural nuances inherent in entering new markets. Without a systematic approach to data collection and analysis, critical decisions regarding recruitment, performance management, and talent development would remain reliant on intuition and anecdotal evidence. This lack of empirical grounding could lead to suboptimal hiring, high turnover rates in new territories, and a failure to capitalize on the diverse skill sets of a multinational workforce. People Analytics provides the necessary framework to overcome these challenges by transforming the HR function from a cost center into a strategic business partner. By leveraging data, Monami can accurately forecast staffing needs, identify key competency gaps, and tailor its talent acquisition strategies to the unique demands of each regional market.

The implementation of a People Analytics framework offers tangible benefits across multiple HR domains, as explored in the paper's body. In recruitment, for instance, a data-driven approach allows for the identification of a candidate's potential for long-term success beyond the superficialities of their resume. By analyzing historical data on employee performance, turnover rates, and skill development, Monami can create predictive models that pinpoint the traits and experiences most likely to lead to high-performance and loyalty within its specific cultural context. This not only streamlines the hiring process but also significantly reduces the costs associated with poor hiring decisions. Similarly, in the realm of performance evaluation, People Analytics offers a more objective and equitable system. Instead of relying on subjective manager ratings, the company can use data on key performance indicators (KPIs), peer feedback, and project outcomes to create a holistic and unbiased view of an employee's contribution. This enhanced transparency and fairness can boost employee morale, increase engagement, and foster a culture of accountability.

However, the transition to a data-driven HR model is not without its challenges. The paper has highlighted the critical importance of a phased implementation strategy that addresses both technological and, more importantly, cultural hurdles. A successful integration requires a significant investment in technology, including a robust Human Resources Information System (HRIS) capable of centralizing data from various sources. Beyond the technological infrastructure, the most significant obstacle will be the cultural shift required within the organization. Employees and managers may be hesitant to embrace a system that they perceive as invasive or overly clinical. Therefore, a comprehensive change management plan is essential, involving transparent communication about the benefits of People Analytics, extensive training on the new tools, and a clear demonstration of how data will be used to empower employees rather than to micromanage them. By framing the initiative as a tool for creating a more

meritocratic and supportive work environment, Monami can secure buy-in and transform initial resistance into enthusiastic adoption.

In conclusion, Monami Impex Ltd.'s journey towards global leadership is inextricably linked to its ability to manage its most valuable asset: its people. The implementation of a People Analytics solution represents a strategic imperative that will enable the company to move beyond reactive HR practices and build a forward-thinking, resilient, and adaptable workforce. By carefully navigating the cultural and technological challenges, Monami can harness the power of data to optimize every facet of its HR operations, from attracting top talent to fostering a culture of continuous learning and development. The path forward is clear: a data-driven HR strategy is the cornerstone upon which Monami will build its sustainable global enterprise. It will not only ensure that the right people are in the right roles at the right time but also that the organization is poised to meet the future demands of an ever-changing global marketplace. This strategic investment in People Analytics is therefore not just an HR initiative; it is a declaration of Monami's commitment to intelligent growth and enduring success on the world stage.
